SUMMARY

Ambitious Frontend Engineer with 3+ years of hands-on expertise in React.js and Next.js, driving the delivery of scalable eCommerce and enterprise-grade web applications. Proficient in building secure, performant UIs with seamless integration of payment gateways (Stripe, Google Pay, Apple Pay) and geolocation services (Google Maps). Skilled at implementing server-side rendering for SEO, optimizing frontend performance, and architecting responsive, user-centric interfaces.

SKILLS

- **Frontend:** React.js, Next.js, Redux, HTML5, CSS3, JavaScript, Tailwind CSS, Ant Design
- **Backend:** ASP.NET Core, Entity Framework Core, SQL Server, Swagger, JWT
- **Tools & Frameworks:** Visual Studio, SSMS, xUnit, Moq, VS Code, Postman
- **Soft Skills:** Leadership, Time Management, Problem Solving, Communication, Adaptability

WORK EXPERIENCE

Software Engineer, Cloudpacer

Jul 2023 - Present

- Developed a scalable eCommerce platform with Next.js, supporting multiple vendors and an admin panel for efficient management.
- Integrated Stripe, Apple Pay, and Google Pay for secure, seamless payment processing, improving checkout experience in React.
- Implemented SEO strategies, meta tags, to enhance visibility and search engine ranking.
- Optimized platform performance, integrated Google Maps, and enabled flexible checkout options for improved user experience.

Associate Software Engineer, ILI Digital

Jul 2022 - Jul 2023

- Developed and maintained scalable microservices with .NET Core 5.0 and 2.2, ensuring high scalability, maintainability, and resilience.
- Optimized data access with Entity Framework Core and raw SQL, enhancing database performance on SQL Server.
- Implemented API rate limiting, improving system security, traffic management, and reliability.
- Conducted thorough testing using xUnit and Moq to ensure microservices functionality and performance.

PROJECTS

E-commerce Platform Development (Next.js & React.js Frontend)

- Built a responsive, mobile-first frontend using Next.js and React.js with server-side rendering for fast load times and optimal SEO.
- Integrated Google Maps API to display interactive, real-time location data with custom markers and user geolocation.
- Implemented seamless client-side payment workflows using Stripe, Google Pay, and Apple Pay for secure transactions.
- Implemented a customer rewards program, allowing users to earn and redeem points for transactions and engagement, enhancing retention and repeat usage.

Real-Time Fleet Management Dashboard (React.js Frontend)

- Built an interactive dashboard in React.js with Mapbox to visualize real-time fleet locations, shipment routes, and geofencing alerts.
- Integrated live backend APIs to power status cards, dynamic charts, and data tables for load statuses, driver performance, and operational analytics.
- Designed and implemented Kanban boards for drag-and-drop load assignments, filtering, and workflow management across carriers and brokers.
- Developed real-time notifications and live alerts to highlight shipment milestones, route deviations, and safety events, ensuring rapid decision-making.

Employee Management System (Full-Stack .NET Core & React.js)

- Developed a .NET Core backend with Entity Framework to create RESTful APIs for employee profiles, department management, attendance tracking, and leave workflows.
- Implemented role-based authentication and authorization using JWT to secure endpoints and enforce access controls for HR, managers, and employees.
- Built a React.js frontend featuring dynamic data tables, interactive forms, and real-time status indicators for managing employee records, approvals, and notifications.
- Designed and integrated a SQL Server database schema to handle payroll calculations, performance reviews, and reporting dashboards, ensuring data integrity and efficient queries.

.NET Core Microservices Architecture

- Architected and developed .NET Core microservices with optimized SQL Server interactions using Entity Framework Core's connection pooling, query tuning, and stored procedures for high-performance data access.
- Integrated ASP.NET Core middleware to enforce distributed API rate-limiting policies, safeguarding services from overload and ensuring secure, reliable operation under peak traffic.

EDUCATION

Bachelor of Science in Computer Science

Sep 2018 - Jul 2022

Punjab University College of Information Technology (PUCIT) — Lahore, Pakistan

- Relevant Coursework: Data Structures, Algorithms, Web Development, Database Management, Software Engineering.
